Summary

Full-stack software engineer with **3+ years** building enterprise-grade microservices, microfrontend platforms, and cloud-native infrastructure. Hands-on across **TypeScript** (Bun, Node.js, Next.js) and **Go** (Gin) backends, React-based frontends with shared component libraries, and AWS/GCP infrastructure with end-to-end ownership of CI/CD, Terraform provisioning, and Kubernetes deployments. Proven track record of reducing latency, automating workflows, and shipping reliable production systems at scale.

Technical Skills

Languages	JavaScript, TypeScript, Go, SQL
Frontend	React.js, Next.js, Zustand, Redux Toolkit, Module Federation (Rspack), React Hook Form, Zod, MUI
Backend	Node.js (Express), Bun (Elysia), Go (Gin), REST APIs, WebSockets, MQTT, Microservices
Databases	PostgreSQL (Drizzle ORM, Indexing, Read Replicas, Query Optimization), MongoDB, Redis
Cloud	AWS (EC2, S3, ECR, CloudFront, IAM, Auto Scaling), GCP (GKE)
DevOps	Docker, Kubernetes, Jenkins, CloudBees CI/CD, GitHub Actions, Terraform, HashiCorp Vault, SonarQube
Testing	Jest, Integration Testing, OpenAPI/Swagger
Tools	Git, Biome, Husky, Linux, Jira, Agile/Scrum

Experience

Software Engineer

Jul 2025 – Present

Creospan Pvt. Ltd., Pune

- Architected a production TypeScript microservice (Bun, Elysia, Drizzle ORM) serving paginated and filtered APIs over a 50+ table PostgreSQL schema with read replicas, processing **1.8M+ records** with sub-200ms p95 response times.
- Delivered 3 React microfrontends using Rspack and Module Federation with shared Zustand state and auto-generated OpenAPI TypeScript contracts, reducing frontend build times by **40%**.
- Automated the maintenance ticket lifecycle across 5 status transitions by integrating enterprise work-order and asset-management APIs, eliminating approximately **200 hours/month** of manual routing.
- Built dual-mode authentication middleware using JWT and API-key based access with scoped RBAC controls across **10+ internal service integrations**.
- Migrated 8 monolithic cron workflows to CloudBees CI/CD pipelines, reducing deployment cycle times from approximately 45 minutes to under 10 minutes.
- Managed AWS infrastructure and Kubernetes deployments with stage/production isolation and automated CI-gated rollouts.

Software Engineer

Aug 2023 – Jul 2025

Privafy Technologies Pvt. Ltd., Bengaluru

- Designed and shipped a shared React component library containing **30+ reusable components** adopted across 3 product modules, reducing UI development effort by approximately **40%**.
- Optimized Go REST APIs on PostgreSQL through query indexing and connection pooling, reducing response latency by **25%**.
- Containerized and deployed 6 microservices on GKE using rolling update strategies and liveness probes, improving deployment frequency by **40%**.
- Provisioned Terraform-managed infrastructure and integrated HashiCorp Vault for secrets management, eliminating hardcoded credentials across environments.
- Implemented MQTT-based real-time messaging for IoT communication and authored OpenAPI documentation used by **5+ engineering teams**.

Projects

HealthSync — AI-Powered Wellness Tracker

Next.js 14, Go, PostgreSQL, AWS, OpenAI API

- Developed an AI-powered wellness platform that tracks nutrition, workouts, hydration, sleep, and body measurements through a unified dashboard.
- Integrated AI-generated health insights and personalized recommendations based on user activity trends and goals.
- Built secure JWT authentication, real-time progress tracking, and Go-based REST APIs backed by PostgreSQL.
- Deployed on AWS using GitHub Actions CI/CD and optimized frontend performance to achieve a Lighthouse score of 94.

Education

B.Tech in Computer Science (Hons.)

Lovely Professional University

2019 – 2023

CGPA: 8.01 / 10
